Geography Knowledge Organiser - Autumn Term

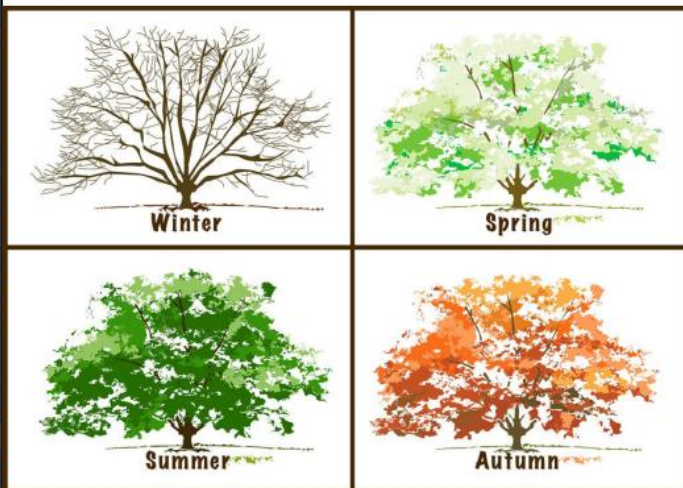

Key Question: Do you get the same weather all over the world?

In Geography this term we are going to be learning all about the weather. We will learn about the four seasons and different types of weather we find in them. Then we will look at world weather and discuss how hot or cold countries are depending on how close they are to the equator.

Seasons

In the UK, we have four seasons:

Autumn: Sept, Oct, Nov **Winter:** Dec, Jan, Feb
Spring: Mar, Apr, May **Summer:** Jun, July, Aug

Weather

These are different types of weather.

What is your favourite type of weather?

Can you keep a record of the weather for a whole week?

World weather

This is a world map, the red line across the middle is called the **Equator**.

Countries that are closer to the Equator have the sun directly above them for most of the year, so they stay hot all year round. Countries that are further away have less direct sun, so they are cooler.

Key Vocabulary

Weather	The condition outside in a particular time or place.
Climate	The weather conditions in an area over a long period
Temperature	A measure of how hot or cold it is
Season	The way the year is divided according to its weather
Forecast	What the weather may be like in the next few days
Equator	The imaginary circle around the earth that is halfway between the North and South Poles.
